Toyota Genuine Parts

Toyota Genuine Parts – genuinely better

Toyota Genuine Parts are designed and engineered to original manufacturer's specifications for maximum performance, longevity and fit to ensure they are genuinely better for your Toyota. Toyota Genuine Parts carry a 12 month unlimited kilometre warranty*, so you have extra peace of mind on their quality and reliability. Toyota Genuine Parts are also model specific, so you can rest assured your vehicle isn't being fitted with 'one size fits all' parts, as is the case with some non-genuine parts.

Your Toyota is only as good as its parts. Make sure you insist on Genuine. It's the best way to keep your Toyota all Toyota.

Please navigate through the links on the left for more information on Toyota Genuine Parts.

* 12 month unlimited kilometre factory warranty applies from the date sold and subject to warranty terms and conditions. The 12 month unlimited kilometre factory warranty is in addition to the implied warranties under the Trade Practices Act. Warranty conditions differ for Tyres, Batteries and Oils and Lubricants. See relevant sections for details.

WARNING: NON-GENUINE PARTS CAN AFFECT YOUR ABILITY TO CLAIM UNDER THE TOYOTA WARRANTY. It is important to note that if a non-genuine part is fitted to your Toyota and that part's failure or the incorrect fitment damages your vehicle, then that damage may not be covered by your Toyota Warranty.

Toyota Genuine Accessories

When you choose Toyota Genuine Accessories you're adding even more personality, protection and practicality to your Toyota - tailoring it to your individual lifestyle needs. Toyota Genuine Accessories are designed, tested and manufactured to strict Toyota standards. This quality and reliability is supported by our Toyota Warranty*. For customised fit, and real peace of mind, keep your Toyota all Toyota.

- Why choose Toyota Genuine Accessories?

* All Toyota Genuine Accessories purchased and fitted to a Toyota are warranted for the remainder of the New Vehicle Warranty or 12 months, whichever is greater. Conditions apply.

Accident Guide

Being involved in a car accident (even a minor scrape) is unnerving enough. Dealing with the consequences and getting your car repaired properly can be an even bigger headache. That's why Toyota has put together this simple guide - to help you get the best quality repairs with the minimum of fuss.

- Download the Accident Repair Guide (pdf) (124KB)

Accident Guide Index:-

- Welcome to the world of 'fine print'.
- What to do at the scene of the accident
- Understanding Your Repairer
- Understanding Crash Parts
- Understanding The Big Safety Risks

Welcome to the world of 'fine print'

It's only when you have to make a claim that you discover, with car insurance, like everything else in life, you only 'get what you pay for'.

The cheapest premium may also mean the insurer will insist on any repairs being done as cheaply as possible. That could mean using non-genuine parts which may be of inferior quality, or not Australian Design compliant, or even recycled parts.

This is exactly why reading the fine print is vital. So phone your insurer or agent and make absolutely sure your policy states that Genuine Parts will be used to return your vehicle to a condition which meets ADR Australian Design Rules compliance.

[Return To Top](#)

What to do at the scene of the accident

- Check that you, your passengers and those in other accident vehicles are not injured. If there are injuries call an Ambulance (000)
- Call the police if there are any injuries, or there is major damage and the vehicles are undriveable.
- Complete Accident Details Report, Other Driver's Details and Insurance Request Form and provide a copy to your insurer.
- Print out the attached ACCIDENT GUIDE form and place it in your glove box to have on hand should you be involved in an accident.

Understanding Your Repairer

Your insurance company may suggest 'preferred' smash repairers, but you should always have the final say in who fixes your vehicle. If you're unsure of where to go, and you own a Toyota, ask your Toyota Dealer for their local recommendations on top quality repairers with a reputation for using Toyota Genuine Parts.

Once you've selected a repairer, the next step is understanding what is covered in the quote/estimate. Quotes are full of technical jargon, so go through it carefully with the repairer or your insurance assessor to make sure Toyota Genuine Parts are covered.

Understanding Crash Parts

Anything that needs replacing after an accident - the metal panels, glass, guards, plastic mouldings and lights, are all called 'Crash Parts' by the trade.

Crash Parts can be broken into three types:

- Toyota Genuine Parts

These are parts manufactured by Toyota, and are exactly the same finish, fit, structural integrity, and safety technology as those used in every new Toyota. They also come with a full Toyota Warranty.

- Copy Crash Parts

These are often cheaper copies of Toyota Genuine Parts or Toyota Genuine Panels. Usually manufactured in developing countries, they may maintain their cheapness by cutting corners in the production process. The metal may be thinner or of poorer quality, the fit and finish may be rougher, and most importantly, they may not adhere to Australian Design Rules. The use of these parts may affect some aspect of your vehicle's warranty.

- 2nd Hand 'Recycled' Parts

Whilst parts may be of a Toyota parts origin, you know nothing about their history. They may have been salvaged from vehicles which have been so badly damaged they have been written off. Obviously, quality may be compromised from such sourcing, so you need to be extra vigilant if your car is being fitted with 'recycled' parts.

[Return To Top](#)

Understanding The Big Safety Risks

By far the biggest concern with non-genuine parts is how they impact on the safety features of your Toyota. Toyota's GOA (Global Outstanding Assessment) system aims to meet or exceed the most stringent safety regulations in the world. Millions of dollars are invested each year in crash testing and safety technology design. Every Toyota benefits from this commitment in ways you'd never be aware of - until you're involved in an accident. For example, every Toyota body and chassis features a myriad of tiny folds, indentations and ripples in the metal. You'd never notice them, but they are the 'fold lines' which form the energy absorbing crumple zones which reduce the impact substantially before it reaches the cabin. Non-genuine parts makers may skip these features to save on production costs.

For your own piece of mind, make absolutely certain only Toyota Genuine Parts are fitted. Make sure you insist on it!

If you value your own safety, make absolutely certain only Toyota Genuine Parts are fitted.

Maintenance

Apart from scheduled servicing, does my vehicle need other maintenance? It's always important to listen to your car and deal with any problems immediately. Be on alert for changes in performance, sounds and visual tip-offs that indicate service or repairs may be needed. Some other clues to look for include engine stumbling, strange engine noises, a leak under the vehicle, a change in noise from the exhaust, spongy feeling brake or clutch pedals, high engine temperature, or if the vehicle steering pulls to one side. If you do experience any of these early warning signs, make sure that you have your local Toyota Service Centre inspect your vehicle at the earliest possible opportunity.

- How to tell if you need new spark plugs
- When to replace your oil filter
- When to replace your muffler
- When to change your drive belt
- When to replace your Brake Pads
- When to replace your Air Filter
- Tell tail signs of a worn clutch
- When to replace your shock absorbers
- Filling up
- Petrol Fuel blended with 10% Ethanol (E10)
- Dealer Safety Check
- Check Engine Oil
- Check Engine Coolant
-

Brake Fluid Level

- Tyre Pressure
- Lights & Basic Functions

How to tell if you need new spark plugs

Common signs that your spark plugs need to be replaced include difficult starting, unstable running, engine misfires, loss of performance and increased fuel consumption.

[Return Maintenance Index](#)

When to replace your oil filter

A Toyota Genuine Oil Filter is designed to perform efficiently for the total time between recommended services. If you have your Toyota Service Centre service your car, then the oil filter will always be replaced according to the servicing schedule.

[Return Maintenance Index](#)

When to replace your muffler

In most instances, your muffler will let you know when it's time for a replacement. Loud, abnormal noise indicates a hole in the muffler, although replacement should be carried out whenever there's any sort of damage or serious corrosion. Also, if your muffler becomes clogged, then you'll notice a loss of engine power. Replace your muffler immediately when:

- It makes a low booming noise, a rattling noise, or a hissing noise.
- The outside of the muffler is covered in soot.
- The internal separator rattles when tapped lightly.
- The muffler's exhaust noise becomes louder.

[Return Maintenance Index](#)

When to change your drive belt

Toyota Genuine Drive Belts are designed for longevity and performance. A drive belt will last 60,000 to 100,000km of normal use, but this can vary greatly due to harsh operating conditions. When a belt wears out, it will start to slip and become noisy. This can cause numerous problems such as reduced cooling efficiency, the battery not being charged properly, and poor performance from the power steering and air conditioning. If you have your Toyota Service Centre service your car, then the Drive Belts will always be inspected for wear and/or replaced according to the servicing

schedule.

Return Maintenance Index

When to replace your Brake Pads

Toyota Genuine Brake Pads are designed to perform efficiently for the total time between recommended services. However, should the brakes begin squeaking or juddering, then have them inspected for wear immediately. If you have your Toyota Service Centre service your car, then the Brakes Pads will always be inspected according to the servicing schedule.

Return Maintenance Index

When to replace your Air Filter

A Toyota Genuine Air Filter is designed to perform efficiently for the total time between recommended services. However, the condition of your Toyota Genuine Air Filter can be judged just by removing the casing and looking at the filter element. If it is dirty, clogged or damaged, then it needs replacing. If it is merely dusty, cleaning will be sufficient. If you have your Toyota Service Centre service your car, then the Air Filter will always be replaced according to the servicing schedule.

NOTE: Under severe operating conditions your Air Filter may require additional maintenance. Please refer to your Service & Warranty handbook or consult your Toyota Dealer.

Return Maintenance Index

Tell tail signs of a worn clutch

- Poor acceleration
- Increase in fuel consumption
- Speed doesn't pick up quickly compared to amount of acceleration
- Poor power when climbing hills

Return Maintenance Index

When to replace your shock absorbers

Toyota Genuine Shock Absorbers are designed for longevity and performance. However, should your steering become unresponsive, and you begin to feel every bump in the road, then they probably need replacing. If you have your Toyota Service Centre service your car, then the shock absorbers will always be inspected according to the servicing schedule.

Return Maintenance Index

Filling up

The best way to ensure trouble-free motoring for years and years is to develop a habit of regularly checking under the

bonnet and around your Toyota. It only takes a few minutes when you're getting petrol, and early detection could save you a lot of money. If you're unsure how to carry out these checks, see your Service & Warranty Handbook or ask your Toyota Service Advisor for a demonstration at your next service.

- Check engine oil/coolant/ brake /clutch /windscreen washer fluid levels.
- Check tyre pressure including spare (when cold)
- At home, you should walk around your car checking all lights and indicators are operating.

Return Maintenance Index

Petrol Fuel blended with 10% Ethanol (E10)
For vehicles manufactured or imported by Toyota Australia:

TOYOTA (Passenger Models)

Locally produced Toyota models will operate satisfactorily on petrol fuel blended with 10% ethanol (E10) from the following production dates:

- Camry: from Jan 1987 (All electronic fuel injection models)
- Corolla: from July 1994
- Avalon: All
- Lexcen: All

(Note: Previous production and Corona model not recommended due to incompatibility of material)

Enthanol blend greater than 10 % is not approved

All Toyota passenger vehicles fully imported by Toyota Australia will operate on petrol fuel blended with 10% ethanol (E10), except older models:

- Supra
- Cressida
- Paseo
- Starlet

(Note: E10 not recommended due to incompatibility of material)

Enthanol blend greater than 10 % is not approved

TOYOTA (Commercial Models)

All Toyota Commercial vehicles imported by Toyota Australia will operated on petrol fuel blended with 10% ethanol (E10), except models fitted with a carburettor as listed:

- Coaster Bus: pre Jan 1993 (carburettor engine)
- Dyna: pre May 1995 (carburettor engine)
- Tarago: pre Oct 1996 (carburettor engine)
- Hilux: pre Aug 1997 (carburettor engine)
- Hiace: pre Aug 1997 (carburettor engine)
- 4 Runner: pre Aug 1997 (carburettor engine)
- Townace: pre Dec 1998 (carburettor engine)
- LandCruiser: pre Aug 1992 (carburettor & EFI engine)

(Note: E10 not recommended due to incompatibility of material) Enthanol blend greater than 10 % is not approved.
Return Maintenance Index

Dealer Safety Check

In addition to the maintenance points listed for each service, your Toyota Service Centre will regularly do a Safety Check over the operation of key features including:

- Replacement of worn wiper blades
- Brake system inspections
- Headlight realignments
- Wheel alignments
- Balance and rotation of wheels for even tyre wear
- Valve clearance adjustments
- Testing and re-gasing air conditioning

Return Maintenance Index

Check Engine Oil

Make sure that the vehicle is parked on a level spot, the engine is at operating temperature and the engine is turned off. Wait a few minutes for the oil to drain to the bottom of the engine. Pull out the dipstick and wipe it clean. Reinsert the

dipstick - pushing it in as far as it will go. Then pull it out and look at the level on the end. If the level is near or below the Low Level, remove the oil filler cap and add small amounts of oil at a time - using the dipstick to check the level.

Return Maintenance Index

Check Engine Coolant

Open the bonnet and look at the see-through coolant reservoir when the engine is cold. If you can't locate the coolant reservoir refer to your Owner's Manual. The coolant level should be between the FULL and LOW lines indicated. If the level is low, add enough coolant to bring the level up to the FULL line.

Return Maintenance Index

Brake Fluid Level

The brake fluid is housed in a see-through reservoir, so do a visual check to make sure that the level is between the 'MAX' and 'MIN' lines. It is normal for the fluid level to go down slightly as the brake pads wear, so be sure to keep the reservoir filled. If the reservoir needs frequent refilling, it may indicate a serious mechanical problem. If you're not sure where to find the brake fluid reservoir, check your Owner's Manual.

Return Maintenance Index

Tyre Pressure

Do a visual check of your tyre pressure every week and check them with a pressure gauge fortnightly, or at the very least, monthly. And don't forget to also check your spare. The importance of the correct tyre pressure can't be stressed enough. The correct tyre pressure for your vehicle can be found on a label inside the driver's door or in your Owner's Manual. For an accurate reading only check the pressure when the tyres are cold.

You will find a pressure gauge and air hose at all petrol stations. Remove the valve caps and hold the pressure gauge to the outlet, then slowly add air until you reach the specified level. Always replace the valve caps tightly.

Return Maintenance Index

Lights & Basic Functions

Walk around your car and check that all lights and indicators are working. Also check the horn and the service indicators which should light up on your dash when you start the engine.

Return Maintenance Index

Why choose Toyota Genuine Accessories?

Genuine Fit, Style and Performance

Toyota Genuine Accessories are designed to integrate perfectly with each Toyota model for genuinely better fit, styling and performance. From Bull Bars, to Tray Bodies, to Carpet Floor Mats, every Toyota Genuine Accessory is designed and manufactured to comply with Toyota's stringent engineering and testing standards for maximum quality assurance.
